Final summary	56

Document type: Brand and public-website strategy specification

Primary purpose: Source of truth for conversion copywriting, SEO planning, public-page architecture, and disciplined brand communication

Scope: Public website only

Dashboard/product application: Out of scope; existing role-based dashboard functionality remains unchanged

Current market: Canada and the United States

Status: Working foundation based on the verified Product & Messaging Foundation and the existing Public Website Design System

Copy policy: This document defines what the website must communicate and how pages should be structured. It intentionally does **not** provide final page copy.

0. How to use this document

This document should be used before writing or rebuilding any GetContractorz public page. It combines the verified product facts, business positioning, trust boundaries, design language, conversion strategy, SEO structure, and page inventory into one operating system for the brand.

It has five jobs:

1. Preserve product accuracy.
2. Establish one consistent brand position.
3. Define the public pages that should exist now, later, or only when data supports them.
4. Give copywriters and designers enough structure to create high-converting pages without inventing claims.
5. Prevent the public website from drifting back toward dummy statistics, fake proof, misleading marketplace language, or unsupported product promises.

Source hierarchy

When sources conflict or future changes occur, use this order:

1. **Current working product behavior and approved business-owner information.**
2. **GetContractorz Public Website Foundation** - verified answers to the 32 business, positioning, trust, conversion, and content questions.
3. **GetContractorz Public Website Design System** - visual implementation and public-page design rules.
4. **This document** - derived strategy, organization, SEO/conversion architecture, and recommended information architecture.
5. Existing public copy - **not a source of truth unless re-verified.**

Accuracy rule

Only claims supported by the current product, approved business information, or reliable platform data may be published. When information is unknown, the website should omit it or state only what is known. It should never fill a credibility gap with invented proof.

Part I - Brand and Business Foundation

1. Brand definition

1.1 What GetContractorz is

GetContractorz is a **business-management platform for service businesses** operating in Canada and the United States. It connects the operational work surrounding clients and jobs inside one system, including:

- Client management.
- Team members/employees.
- Business services.
- Service-specific questionnaires.
- Terms and conditions.
- Personalized client services.
- Quotes.
- Assigned jobs.
- Before-and-after job images.
- Invoices.
- Business and banking information.
- Payouts.
- General dashboard information and analytics.
- A public Marketplace where visitors can browse registered businesses and access their public contact information.

1.2 What GetContractorz is not

The brand must not be positioned as:

- A construction company.
- A contractor that performs the listed services.
- A staffing company employing Marketplace businesses.
- A verification or screening service.
- A licensing authority.
- A quality-guarantee program.
- A lead-generation guarantee.
- A service-booking intermediary that chooses a provider for the customer.
- A traditional directory whose main product is listings.
- A marketplace that becomes a party to the service agreement.
- A paid subscription product with finalized public plans or pricing, because no such pricing model is currently approved.

1.3 Core product category

Primary category: Service-business management platform.

Useful secondary category language may include:

- Contractor management platform.
- Service business operations platform.
- Job and client management platform for service businesses.
- Business operations software for property-related service providers.

“CRM” may be used only where the context is specifically client management. It should not reduce GetContractorz to a CRM because the product also covers jobs, questionnaires, terms, quotes, invoices, images, team assignments, payouts, and Marketplace visibility.

1.4 Brand purpose

Help service businesses organize and manage the operational workflow around their customers and jobs, from client onboarding and service requirements to team assignment, work documentation, quoting, invoicing, and payout tracking.

1.5 Practical brand promise

The safest high-level promise is **organization and workflow centralization**, not guaranteed growth or outcomes.

Approved concise value proposition:

Run your service business from one organized workspace.

This should function as a strategic message, not necessarily as the final homepage headline.

2. Market and audience hierarchy

2.1 Geographic scope

GetContractorz currently serves businesses in:

- Canada.
- United States.

Do not claim province-, state-, metro-, or city-level coverage unless the claim is backed by actual registered-business data.

2.2 Primary public audience

The primary audience is owners and managers of supported service businesses that need a simpler way to organize operations.

This includes businesses in construction, cleaning, repair, maintenance, moving, landscaping, and the other supported service categories.

2.3 Secondary public audience

People looking for one of the supported service providers through the Marketplace.

Their public-site need is discovery and direct contact, not a promise that GetContractorz has selected, verified, or endorsed the business.

2.4 Existing invited clients

Invited clients are not the primary acquisition audience, but the public website should clearly explain the client experience because they may land on public pages before or after receiving an invitation.

Their needs include:

- Understanding what GetContractorz is.
- Understanding why they received an invitation or magic link.
- Knowing what they can do in their account.
- Understanding that GetContractorz does not guarantee the service business.
- Knowing that there is currently no GetContractorz platform fee for them.

2.5 Employees

Employees are product users but not a primary public acquisition audience. Their workflow should be explained as part of "How It Works" or role-based product explanations rather than receiving a major SEO landing page at launch.

3. User and role model

GetContractorz has four registered roles plus a public visitor state.

Role	Definition	Public-site relevance
User	Newly registered account that has not yet registered a business	Explains onboarding and the transition to Manager
Manager	Service-business owner or manager with access to the complete business workspace	Primary conversion audience
Employee	Team member who can view and complete assigned jobs	Product workflow and team-management proof
Client	Customer of a registered business with access to relevant service information/actions	Secondary informational audience
Marketplace visitor	Public user browsing registered businesses and contact information	Secondary acquisition/discovery audience

Role hierarchy for messaging

1. **Manager / service business** - dominant on the homepage and main product pages.
2. **Marketplace visitor** - prominent but separate discovery path.
3. **Client** - supported through a clear informational page and FAQ coverage.
4. **Employee** - explained inside product/process pages.
5. **User** - described mainly in registration/onboarding explanations.

4. Jobs to be done

4.1 Service-business owner / manager

When day-to-day operations are spread across disconnected tools or manual processes, the manager needs one place to organize:

- Clients.
- Services.
- Service requirements.
- Team members.
- Job assignments.
- Work documentation.
- Quotes.
- Invoices.
- Payouts.
- Business information.

The desired outcome is better operational visibility and organization. Do not translate this into unsupported claims about time saved, revenue increased, or errors eliminated unless real data later exists.

4.2 Employee

When a manager assigns work, the employee needs to see and complete the assigned job and document the work using before-and-after images.

4.3 Invited client

When receiving a service through a registered business, the client needs a clear place to:

- Access their account.

- View services created for them.
- Complete service questionnaires.
- Follow service-related email/magic-link actions.
- Access relevant quotes.
- Access relevant invoices.

4.4 Marketplace visitor

When searching for a service provider, the visitor needs to:

- Browse registered businesses.
- Understand their categories/location information where supplied.
- View public business information.
- Contact a selected business directly.

The relationship and service arrangement remain between the visitor and the selected business.

5. Problem landscape

5.1 Primary problem for service businesses

Service businesses may manage client information, job details, employees, requirements, photos, quotes, invoices, and payment-related information across separate systems, spreadsheets, messages, documents, or manual processes.

GetContractorz's role is to centralize the supported workflows into one organized platform.

5.2 Client-side problem

Service information can be fragmented between email, forms, quotes, invoices, and the business itself. GetContractorz gives invited clients a role-specific place to complete required questionnaires and access information relevant to their services.

5.3 Discovery problem

People seeking service providers need a straightforward way to find registered businesses and access their public contact information. The Marketplace supports this without representing those businesses as verified or endorsed.

6. Competitive and category positioning

6.1 Core differentiation

GetContractorz should not compete only on "finding contractors." Its stronger distinction is:

- The **core product is operational software for service businesses.**
- The **Marketplace is a complementary public discovery layer.**
- Registered businesses can manage the client/job workflow inside the same broader platform in which they are publicly discoverable.

6.2 Distinction from Google or a traditional directory

A search engine or directory mainly helps someone find a business. GetContractorz's main product is the business workspace used to manage service operations. The Marketplace adds discoverability to that operational platform.

6.3 Positioning statement

For service businesses in Canada and the United States that need to organize clients, teams, jobs, documents, quotes, invoices, and payout-related workflows, GetContractorz is a service-business manage-

ment platform that brings those operational activities into one connected workspace. Unlike a traditional directory, its core value is the business operations platform, while its Marketplace provides a separate way for the public to discover registered businesses and contact them directly.

This is a strategic positioning statement, not final customer-facing copy.

6.4 Positioning hierarchy

Public messaging should generally move in this order:

1. **Business outcome category:** organized service-business operations.
 2. **Mechanism:** one connected workspace.
 3. **Concrete capabilities:** clients, team, services, questionnaires, jobs, quotes, invoices, payouts, work images.
 4. **Secondary value:** Marketplace discoverability/direct contact.
 5. **Low-friction conversion:** current free registration and access.
 6. **Trust boundary:** no verification, endorsement, guaranteed leads, or guaranteed service outcomes.
-

Part II - Product Capability and Workflow Truth

7. Manager capabilities

A Manager can currently:

- Manage profile information.
- Manage business information.
- Manage banking information.
- Manage credential information.
- Create service questionnaires.
- Create service terms and conditions.
- Add and manage clients.
- Add and manage services.
- Add and manage team members.
- Create and send quotes.
- Assign jobs.
- Monitor before-and-after job images.
- Manage invoices.
- Review payouts.
- View general business information and analytics through the dashboard.

These capabilities form the factual product proof for product pages. Copy should favor exact capabilities over vague “powerful tools” language.

8. Client capabilities

Depending on access and service status, clients can:

- Access their role-specific dashboard.
- View services created for them.
- Complete service questionnaires.
- Receive service-related email notifications.
- Use magic links related to their service workflow.
- Access relevant quotes.
- Access relevant invoices.

Do not claim client features not verified in the product foundation.

9. Business registration and operating workflow

The verified standard business journey is:

1. A person registers and initially receives the User role.
2. The user completes the business-registration form in the Business tab.
3. The business is created and the role changes to Manager.
4. The Manager gains access to the business workspace.
5. The Manager selects the applicable supported service category or categories.
6. The Manager configures the business's services.
7. The Manager creates service questionnaires and terms and conditions.
8. The Manager adds clients and team members.
9. A personalized service is created for a client and assigned to an employee.
10. The client submits the required questionnaire.
11. The Manager reviews the submission and activates the service.

12. The assigned employee completes the job and uploads before-and-after images.
13. The Manager handles related quotes, invoices, payouts, and business reporting through the workspace.

Copywriting implication

Do not force all 13 steps into the homepage. Use a short conversion-oriented version on high-level pages and the full workflow on the "How It Works" page.

10. Invited-client workflow

The verified standard invited-client journey is:

1. A business manager creates the client's record.
2. The client receives an email invitation.
3. The client follows the link to create or access the account.
4. The manager creates a personalized service for the client.
5. The client receives a magic link to the service questionnaire.
6. The client completes and submits the questionnaire.
7. The manager reviews the submission.
8. The manager changes the service from pending to active.
9. The client accesses the relevant parts of the platform, including applicable services, quotes, and invoices.

Copywriting implication

Public copy should explain enough of this process to reduce confusion around invitations, questionnaires, and magic links, without turning every marketing page into product documentation.

11. Employee workflow

The verified employee-level role is narrower than the Manager role:

- Employees can view assigned jobs.
- Employees can complete assigned jobs.
- The workflow includes uploading before-and-after images.

Do not imply employees have the complete Manager workspace unless the product later changes.

12. Marketplace workflow

The verified Marketplace relationship is:

1. A visitor can browse registered businesses.
 2. Public contact information can be accessed.
 3. The visitor chooses which business to contact.
 4. Communication and service arrangements happen directly between the visitor and the business.
 5. GetContractorz does not select the business for the visitor.
 6. GetContractorz does not guarantee the business, service quality, job completion, response, or outcome.
-

Part III - Supported Service Market

13. Current supported service categories

The current service-category set is:

1. Construction.
2. Cleaning.
3. Landscaping.
4. Plumbing.
5. Electrical.
6. Snow Removal.
7. HVAC.
8. Roofing.
9. Siding.
10. Handyman Services.
11. Flooring.
12. Windows & Doors.
13. Appliance Repair.
14. Moving Services.
15. Carpet Cleaning.
16. Pest Control.

Category policy

- No category currently has higher strategic priority.
- Present the categories as equally valid unless real market/business data later supports prioritization.
- The category set is not permanent.
- Additional categories may be introduced as the platform expands.
- Category lists and counts should be data-driven.
- Avoid hard-coding a permanent “16 categories” marketing claim when the number may change.

SEO implication

Category pages are a strong potential SEO expansion area, but only where each page can offer unique product relevance and/or real Marketplace inventory. Do not generate sixteen near-identical pages with only the category name replaced.

Part IV - Business Model, Pricing and Commercial Truth

14. Current business model

GetContractorz is currently free and does not yet generate revenue from users.

A subscription model is planned for the future, but:

- No plan structure is approved.
- No price is approved.
- No billing arrangement is approved.
- No future price promise should be published.

14.1 Service-business cost

Business registration and platform access are currently free.

14.2 Client and Marketplace visitor cost

There is currently no GetContractorz platform fee for clients or Marketplace visitors.

Any service price, payment terms, or service agreement is handled directly with the selected service business.

14.3 Pricing-page policy

Do **not** create a traditional Pricing page at this stage.

A dedicated Pricing page should be introduced only when at least one of the following is approved:

- Paid plans.
- Plan names.
- Feature entitlements.
- Billing cycle.
- Trial structure.
- Subscription transition terms.
- Publicly communicable pricing policy.

Until then, "currently free" belongs in relevant conversion and FAQ contexts, not inside a fake pricing table.

Part V - Trust, Proof and Claim Governance

15. Verification status

GetContractorz does **not** currently independently verify:

- Business identity.
- Licensing.
- Credentials.
- Insurance.
- Employee backgrounds.
- Service quality.
- Business claims.
- Job quality or completion.

Prohibited trust language

Do not call registered businesses:

- Verified.
- Screened.
- Approved.
- Licensed by GetContractorz.
- Trusted by GetContractorz.
- Vetted.
- Certified by GetContractorz.
- Recommended by GetContractorz.
- The best.

If a business itself provides credentials or licensing information, the website must not visually or verbally convert that business-supplied information into a GetContractorz verification claim.

16. Social proof status

There are currently no approved:

- Testimonials.
- Reviews.
- Ratings.
- Case studies.
- Customer success stories.
- Partnerships.
- Partner/customer logos.
- Trust counts.

Therefore, no public page should be designed so that it depends on social proof to feel complete.

Future proof policy

When authentic proof becomes available, every proof item should have:

- Source.
- Permission/approval status.
- Date.
- Context.
- Exact wording or approved paraphrase.
- Applicable product/category.

- Expiry/review date where appropriate.
-

17. Statistics policy

No platform statistics are currently approved for public use.

Do not publish counts for:

- Registered businesses.
- Clients.
- Jobs.
- Invoices.
- Locations.
- Marketplace activity.
- Payouts.
- Growth.
- Response rates.
- Leads.

If a category count is displayed, generate it from current platform configuration rather than hard-coding it.

18. Guarantees and promises

GetContractorz does not guarantee:

- Business quality.
- Licensing.
- Client outcomes.
- Job completion.
- Response times.
- Service satisfaction.
- Marketplace leads.
- Earnings.
- Savings.
- Business growth.

Safe factual claims include:

- Platform access is currently free.
 - The platform centralizes the supported operational workflows.
 - Registered businesses can be listed in the Marketplace.
 - Marketplace visitors can access public contact information and contact businesses directly.
-

19. Mandatory claim exclusions

GetContractorz public copy must never:

1. Call businesses verified, screened, approved, or licensed.
2. Claim GetContractorz guarantees service quality.
3. Claim GetContractorz guarantees job completion.
4. Describe listed providers as “the best” without objective evidence.
5. Publish unsupported statistics.
6. Publish invented ratings, reviews, testimonials, partnerships, or customer logos.
7. Imply Marketplace businesses are employees of GetContractorz.

8. Imply GetContractorz itself performs the listed services.
 9. Promise earnings, savings, leads, growth, or conversion results.
 10. Advertise future subscriptions as if they are available now.
 11. Suggest GetContractorz selects or hires the service business for the client.
 12. Suggest that contacting a Marketplace business creates an obligation.
 13. Suggest that GetContractorz becomes a party to the service arrangement unless the business model changes and this is explicitly approved.
-

Part VI - Brand Positioning System

20. Brand essence

Organized service operations, presented simply.

The brand should project operational confidence rather than hype.

20.1 Brand attributes

GetContractorz should feel:

- Professional.
- Trustworthy without implying verification.
- Simple.
- Helpful.
- Practical.
- Organized.
- Modern.
- Clear.
- Confident.
- Grounded in real operations.

It should not feel:

- Overly corporate.
 - Technically complicated.
 - Loud.
 - Trend-chasing.
 - Like a generic SaaS template.
 - Like a contractor itself.
 - Like a lead-broker marketplace.
 - Like a "guaranteed results" sales product.
-

21. Messaging pillars

Pillar 1 - One organized workspace

Centralize supported operational work instead of scattering it across disconnected tools and manual processes.

Proof points: clients, team members, services, questionnaires, terms, jobs, quotes, invoices, payouts.

Pillar 2 - Structured client and service workflow

Create clients, create personalized services, collect questionnaires, activate services, and give clients access to relevant information.

Proof points: invitations, magic links, service questionnaires, client dashboard, quotes, invoices.

Pillar 3 - Team and job coordination

Assign services/jobs to employees and document completed work with before-and-after images.

Proof points: employee role, assigned jobs, work images.

Pillar 4 - Business administration

Keep quoting, invoicing, payout review, business/banking information, and dashboard information within the broader operational workspace.

Pillar 5 - Marketplace discovery

Registered businesses can be publicly discoverable and Marketplace visitors can contact a chosen business directly.

Boundary: discovery does not equal endorsement, verification, selection, or guaranteed leads.

Pillar 6 - Low-friction entry

Registration and platform access are currently free.

Boundary: do not promise that access will remain free forever.

22. Messaging hierarchy by page type**High-conversion product pages**

Lead with:

1. Operational problem.
2. Organized-workspace value.
3. Concrete features/workflow.
4. Current-free-access CTA.
5. Trust/objection answers.

Marketplace pages

Lead with:

1. Discovery task.
2. Search/filter/listing information.
3. Direct contact action.
4. Neutral verification/service-agreement disclaimer.

Client information pages

Lead with:

1. Why the client may be using GetContractorz.
2. What the client can access/do.
3. How invitations/questionnaires work.
4. What GetContractorz does and does not guarantee.

About page

Lead with:

1. The operational problem the product is designed around.
 2. What GetContractorz is building.
 3. Product principles.
 4. Approved company/team facts only.
-

Part VII - Voice and Copywriting Standards

23. Brand voice

23.1 Professional

Use polished, complete language that feels appropriate for a business owner managing customers, workers, documents, and money-related workflows.

23.2 Simple

Explain product actions using the same nouns users see in the product. Prefer "clients," "jobs," "quotes," "invoices," and "questionnaires" over abstract software jargon.

23.3 Helpful

Answer the question a visitor is likely asking at that moment. Do not force promotional copy into every sentence.

23.4 Confident

State verified capabilities directly. Avoid weakening true claims with excessive qualifiers.

23.5 Restrained

Do not use exaggerated transformation language to compensate for missing proof.

24. Recommended writing style

Use:

- Active voice.
- Short-to-medium sentences.
- Specific product nouns.
- Operational verbs: manage, add, assign, create, send, review, complete, access, upload, organize.
- Clear audience labels.
- Scannable headings.
- One idea per paragraph.
- Concrete feature-to-outcome connections.
- Direct CTA labels.

Avoid:

- "Revolutionary."
- "Game-changing."
- "Best-in-class."
- "Trusted by thousands" without data.
- "Guaranteed."
- "Verified professionals."
- "Never lose a lead again."
- "Skyrocket your business."
- "Save X hours" without evidence.
- "All-in-one" when it can imply unsupported breadth.
- Overly technical backend/product terminology.
- Empty phrases such as "innovative solutions designed for your success."

24.1 Tone by context

Context	Tone
Homepage/product	Confident, concise, operational
How It Works	Clear, instructional, reassuring
Marketplace	Neutral, useful, discovery-oriented
Client information	Helpful, calm, explanatory
FAQ	Direct, factual, non-defensive
Contact	Helpful, concise
Trust disclaimer	Calm, plain-language, non-alarmist
Legal	Precise, readable, formal enough for the purpose

25. Brand terminology

Preferred terms

- Service business.
- Service-business owner or manager.
- Business workspace.
- Platform.
- Marketplace.
- Registered business.
- Client.
- Employee/team member.
- Service.
- Service questionnaire.
- Terms and conditions.
- Quote.
- Job.
- Before-and-after images.
- Invoice.
- Payout.
- Public contact information.
- Currently free.

Terms requiring care

Contractor: Useful in brand/SEO contexts, but not every supported business is naturally described as a contractor. Pair with “service business” when broader coverage matters.

Marketplace: Make clear it is a discovery/contact layer, not a guarantee or managed procurement service.

Credentials: Can refer to stored business/credential information, but do not imply GetContractorz validates it.

Analytics: The foundation confirms general business information and analytics through the dashboard. Do not invent specific dashboards, metrics, or forecasting functions.

Free: Prefer “currently free” or “registration and platform access are currently free” when permanence could otherwise be implied.

Part VIII - Visual Brand System

26. Design principle

Preserve the visual grammar, not the old page composition.

The existing public site is a visual reference, not a content reference.

26.1 Visual grammar

GetContractorz should visually communicate:

- **Operational confidence** through deep navy.
- **Priority and action** through restrained orange.
- **Clarity** through soft gray, white space, and structured layouts.
- **Contractor-adjacent utility** through geometric lines, icons, cards, and grids rather than generic stock photography.

27. Core visual identity

27.1 Colors

Token	Value	Primary role
Navy	#09355D	Structure, dark sections, footer, secondary actions
Orange	#FF7A00	Primary CTA, accent words, priority
Orange hover	#FF8B00	CTA hover
Page gray	#F5F7F9	Main light canvas
White	#FFFFFF	Surfaces/cards
Ink	#171717	Main text
Dark card	#131317	Emphasis cards
Dark card soft	#22242F	Alternate emphasis card
Border	#E5E7EB	Inputs/cards
Field	#F9FAFB	Form fields

Approximate page usage:

- 60-70% soft gray and white.
- 20-30% navy.
- 5-10% orange.

Orange should identify priority, not fill the whole brand experience.

27.2 Typography

- **Display:** MODERNIZ for hero H1 and major visual H2s.
- **Marketing/intro:** Open Sans.
- **Body/interface:** Inter, with Ubuntu/Arial fallback.

Display headings can use uppercase as part of the existing identity, with one meaningful orange accent fragment.

27.3 Layout character

- Spacious.
- Large section spacing.

- Capped desktop content width around 1152-1200px.
- Rounded cards.
- Restrained shadows.
- Responsive 1/2/3/4-column grids.
- Alternating soft-gray, white, and navy sections.
- Sparse geometric decoration.
- Real product screenshots only when current and accurate.

27.4 Photography policy

Photography is not required for the brand.

If added later:

- Use authentic service-business environments.
 - Avoid generic hard-hat handshakes.
 - Avoid overly staged stock scenes.
 - Keep treatment documentary and neutral.
 - Do not use heavy orange overlays.
-

Part IX - Conversion Strategy

28. Primary conversion funnel - service businesses

Funnel objective

Move a qualified service-business visitor from recognition of an operational problem to free account creation and business registration.

Recommended funnel sequence

1. **Recognition:** "This platform is for businesses like mine."
2. **Problem:** Operations are scattered or hard to manage.
3. **Value:** One organized workspace.
4. **Specific proof:** Show actual supported capabilities.
5. **Process clarity:** Explain setup and operating flow.
6. **Fit:** Show supported categories.
7. **Risk reduction:** Explain what "currently free" means and answer concerns.
8. **Action:** Get Started Free / Create Your Free Account.
9. **Product onboarding:** Registration → User role → business registration → Manager role.

Primary site CTA

Get Started Free

Approved contextual alternatives:

- Create Your Free Account.
- Register Your Business.
- Start Managing Your Business.

Use one primary orange CTA per small decision area.

29. Secondary conversion funnel - Marketplace visitors

Funnel objective

Help visitors find a relevant registered business and move to direct contact.

Funnel sequence

1. Search or browse.
2. Filter by supported category and available location data.
3. Review a business profile.
4. View contact information.
5. Contact the selected business directly.

Primary Marketplace CTA

Explore the Marketplace

Contextual actions:

- View Business.
- View Contact Information.
- Contact This Business.

Marketplace conversion boundary

Do not make the conversion flow resemble a GetContractorz guarantee, booking contract, or provider recommendation unless the product/business model later changes.

30. Client reassurance funnel

Clients may arrive after an email invitation or magic link. Their public journey should answer:

1. What is GetContractorz?
2. Why did I receive this link?
3. What can I access?
4. What is the questionnaire for?
5. Is there a GetContractorz fee?
6. Does GetContractorz guarantee or employ the service provider?
7. How do I get help if something seems wrong?

The public site should reduce product confusion without disclosing private service information.

31. Objection framework

Service-business objections to answer

- Is it really free right now?
- Is my service category supported?
- How difficult is setup?
- What features are available?
- How are business and financial details handled?
- Will future charges apply?
- Does the Marketplace guarantee leads?

Client/Marketplace objections to answer

- Are listed businesses verified?
- Does GetContractorz guarantee their work?
- How is personal information handled?
- Does contacting a business create an obligation?
- Is GetContractorz part of the final agreement?
- Does GetContractorz charge a Marketplace fee?

Copy rule

Answer objections with verified facts. Do not invent reassurance such as "bank-level security," "24/7 support," "fully insured providers," or "guaranteed response" unless separately verified and approved.

Part X - SEO Strategy and Search Architecture

32. SEO objective

Build organic visibility around two real search-intent families without confusing them:

1. **Business software intent** - service businesses looking for software to manage operations.
2. **Provider discovery intent** - people looking for registered service businesses.

The business software intent should dominate the marketing architecture because service businesses are the primary public audience.

33. Primary SEO topic clusters

Cluster A - Service-business management

Potential intent families:

- Service business management software.
- Contractor management software.
- Contractor business management software.
- Job management for service businesses.
- Client management for service businesses.
- Service business operations platform.
- Contractor operations software.

Cluster B - Workflow/capability intent

Potential intent families:

- Client management.
- Employee/team job assignment.
- Service questionnaires.
- Quote management.
- Invoice management.
- Job photo documentation.
- Service workflow management.

Pages should not target a capability keyword unless the product genuinely supports the functionality described.

Cluster C - Service-category software intent

Examples:

- Construction business management software.
- Cleaning business management software.
- Landscaping business management software.
- Plumbing business management software.
- HVAC business management software.

Create category pages only when each page can be uniquely useful and product-specific. Do not clone the same page sixteen times.

Cluster D - Marketplace discovery

Examples:

- Browse [service category] businesses.
- [Service category] businesses in a supported location.

- Service businesses in [location].

Location variants must be driven by actual registered-business data. Do not create empty or misleading location pages simply to capture “near me” traffic.

34. Search intent mapping

Intent	Best page type	Primary conversion
Brand query	Home	Get Started Free / Marketplace
Service-business software	For Service Businesses / Features	Get Started Free
Product capability	Features	Get Started Free
How platform works	How It Works	Get Started Free
Client invitation/product understanding	For Clients	Login / explanatory next step
Supported business type	Categories index	Category page / Get Started Free
Category-specific software	Category detail	Get Started Free
Find provider	Marketplace	View Business
Find specific registered business	Business profile	Contact business
Brand trust/company	About	Get Started Free / Contact
Objection/question	FAQ	Relevant CTA
Support/sales enquiry	Contact	Submit contact form

35. SEO page-quality rules

Every indexable page should have:

- One clear search intent.
- One semantic H1.
- Unique title metadata.
- Unique meta description.
- Useful body information.
- Internal links.
- A logical conversion action.
- Crawlable server-rendered core content.
- Canonical URL.
- Accurate structured data only where applicable.
- No unsupported keyword-driven claims.

Thin-page rule

Do not index pages that exist only because a filter combination can generate a URL.

Examples to avoid:

- Empty city pages.
- Near-identical category + city permutations.
- Pages with only a category title and a list count of zero.
- Duplicate Marketplace filter states.
- Business profiles with insufficient public information.

36. Structured-data principles

Use structured data only when the visible page actually supports it.

Potential types may include:

- Organization for GetContractorz.
- WebSite.
- BreadcrumbList.
- FAQPage only when the FAQ content is visible and eligible.
- ItemList for public Marketplace listings where appropriate.
- Business-related schema for individual business profiles only when the supplied fields accurately support it.

Do not use review or aggregate-rating schema because there is currently no approved review/rating system.

Do not mark listed businesses as verified or endorsed through structured data.

37. Indexation principles

Index by default

- Home.
- For Service Businesses.
- Features.
- How It Works.
- For Clients.
- Marketplace landing/list page.
- Categories index.
- About.
- FAQ.
- Contact.
- High-quality category detail pages.
- Complete Marketplace business profiles where public indexing is approved.

Conditional index

- Category pages lacking unique content.
- Business profiles with minimal/duplicate information.
- Location pages.
- Filter/sort pages.

Usually noindex or non-acquisition

- Authentication pages.
 - Account creation steps after the public entry point.
 - Internal dashboard.
 - Private client/employee/business pages.
 - Empty Marketplace states.
 - Search-result permutations that create duplication.
-

Part XI - Recommended Public Information Architecture

38. Page-count model

The recommended architecture is deliberately divided into three layers.

Layer A - Core launch pages: 12

These pages should exist as the stable public foundation:

1. Home.
2. For Service Businesses.
3. Features.
4. How It Works.
5. For Clients.
6. Marketplace.
7. Supported Service Categories.
8. About.
9. FAQ.
10. Contact.
11. Privacy Policy.
12. Terms of Use.

Layer B - Conditional/support pages: 2

Create when applicable/approved:

13. Cookie Policy - if the site uses cookies/tracking that warrants a dedicated policy and consent treatment.
14. Accessibility Statement - recommended as a public commitment page once the wording and responsible contact/process are approved.

These are not conversion landing pages.

Layer C - Dynamic SEO/public templates

These are page **types**, not one fixed count:

- **Category detail template:** up to one page per supported category, currently up to 16, but publish/index only when each page is uniquely useful.
- **Marketplace business profile template:** one public profile per registered business that is approved/eligible for public display.
- **Location landing page template:** not a launch requirement; create only when real listing density and unique useful information support the location.
- **Marketplace filter/search states:** functional pages, usually not separate SEO landing pages unless intentionally designed and canonicalized.

Practical count

- **Minimum disciplined launch:** 12 core pages.
- **With conditional policy pages:** 14.
- **With all 16 high-quality category pages:** up to 28-30 static/indexable content pages before counting business profiles.
- **Business-profile count:** dynamic and based on actual registered businesses.
- **Location-page count:** zero at launch unless real platform data supports specific markets.

Part XII - Page Blueprints

The following are architecture specifications, not final copy.

39. Home

Purpose: Establish the brand category, make the primary service-business value immediately clear, prove product fit through verified capabilities, introduce the Marketplace as secondary value, and drive free registration.

Primary audience: Service-business owners/managers.

Secondary audience: Marketplace visitors.

Primary conversion: Get Started Free.

Secondary conversion: Explore the Marketplace.

SEO role: Brand + broad service-business management intent.

Recommended layout

1. Optional factual announcement bar.
2. Global header.
3. Signature centered hero.
4. Short product-value/problem framing.
5. Verified capability summary.
6. Manager workflow preview.
7. Role-aware overview: Manager, Employee, Client.
8. Supported categories preview.
9. Marketplace introduction.
10. Trust/accuracy reassurance.
11. Selected FAQ.
12. Final CTA panel.
13. Footer.

Content requirements

The page must communicate:

- Service-business management is the core product.
- Operations are centralized in one workspace.
- Concrete feature categories.
- Current Canada/United States market.
- Current free access.
- Marketplace is complementary.
- No verification/guarantee implications.

Do not include

- Fake statistics.
 - Testimonials.
 - Partner logos.
 - Ratings.
 - "50+ industries."
 - Unsupported locations.
 - Pricing cards.
 - "Verified professionals."
-

40. For Service Businesses

Purpose: Dedicated high-intent conversion page for owners/managers evaluating whether GetContractorz fits their operations.

Audience: Service-business owners/managers.

Primary conversion: Get Started Free / Register Your Business.

SEO role: Service business management software / contractor management software intent.

Recommended layout

1. Compact/signature hero.
2. Operational problem framing.
3. "What you can manage" capability architecture.
4. Client/service workflow.
5. Team/job workflow.
6. Quotes/invoices/payout-related workflow.
7. Supported-category fit.
8. Current-free-access explanation.
9. Objection/reassurance block.
10. FAQ.
11. Final CTA.

Strategic role

This page should carry the strongest commercial SEO intent. It can be more specific than the homepage and should connect product functions directly to common service-business operational needs.

41. Features

Purpose: Give a complete, organized product-capability overview using only verified current functionality.

Audience: Evaluating service-business owners/managers; secondary client/employee readers.

Primary conversion: Get Started Free.

SEO role: Capability and product-feature search intent.

Feature groups

1. Client and service management.
2. Questionnaires and terms and conditions.
3. Team members and job assignment.
4. Before-and-after job images.
5. Quotes.
6. Invoices.
7. Business/banking/credential information.
8. Payout review.
9. Dashboard information and analytics.

Layout

- Feature hero.
- Optional anchor navigation.
- Alternating feature groups.
- Real screenshots only when accurate and privacy-safe.
- Role context where a feature differs by Manager/Employee/Client.
- FAQ.
- Final CTA.

Do not invent integrations, automation, mobile/offline functionality, accounting sync, messaging, support tiers,

or other unverified capabilities.

42. How It Works

Purpose: Explain the operating model clearly enough to reduce setup friction and user confusion.

Audience: Prospective Managers; invited Clients; curious Employees.

Primary conversion: Get Started Free.

SEO role: Product/process intent.

Recommended layout

1. Compact hero.
2. Role overview.
3. Business registration workflow.
4. Client invitation/questionnaire workflow.
5. Employee assigned-job workflow.
6. Quote/invoice/payout workflow.
7. Marketplace visitor workflow.
8. FAQ.
9. Final CTA.

Copy rule

Use sequential, product-accurate steps. Do not compress unrelated role workflows into one ambiguous funnel.

43. For Clients

Purpose: Explain the invited-client experience and reduce confusion around emails, account access, questionnaires, quotes, and invoices.

Audience: Clients of registered businesses.

Primary conversion: Appropriate login/access action.

Secondary conversion: Contact/help route if the client needs assistance.

SEO role: Branded informational/support intent, not major acquisition.

Recommended layout

1. Compact hero.
2. Why a client may receive a GetContractorz invitation.
3. What clients can access/do.
4. Invitation and magic-link process.
5. What GetContractorz does not guarantee.
6. Fee/service-agreement clarification.
7. Client FAQ.
8. Login/help action.

Do not expose private workflow information or imply GetContractorz controls the service agreement.

44. Marketplace

Purpose: Let visitors browse real registered service businesses and reach their public business profiles/contact information.

Audience: People seeking service providers.

Primary conversion: View Business.

Secondary conversion: Contact This Business from profile.

SEO role: Provider discovery.

Recommended layout

1. Compact left-aligned hero.
2. Search.
3. Category filter from current data.
4. Country/region filter only where data supports it.
5. Real result count.
6. Business-card grid.
7. Pagination/load-more.
8. Empty/no-result state.
9. Neutral Marketplace disclaimer.
10. Footer.

Business card fields

Where supplied/approved:

- Logo or initials.
- Business name.
- Primary category.
- Additional category chips.
- Location.
- Short description.
- View Business action.

Excluded UI

- Verification badges.
- Star ratings without review data.
- "Top rated."
- "Recommended."
- Guaranteed response times.
- Fake project/job counts.

45. Marketplace Business Profile - dynamic template

Purpose: Give a selected registered business a useful public profile and enable direct contact.

Audience: Marketplace visitors.

Primary conversion: Contact the business directly.

SEO role: Brand/business discovery for the listed business where indexing is appropriate.

Recommended layout

1. Breadcrumb.
2. Business profile header.
3. Business description.
4. Supported service categories.
5. Public contact details.
6. Location/service area when supplied.
7. Business-supplied information disclaimer.
8. Related businesses only when real data supports relevance.

Required trust treatment

A calm, visible notice should explain that listing information is supplied by the business and is not independently verified by GetContractorz.

Indexing threshold

A profile should be considered for indexing only if it contains enough unique public information to be useful. Thin profiles should not become SEO doorway pages.

46. Supported Service Categories

Purpose: Help businesses and Marketplace visitors understand which service categories the platform currently supports.

Audience: Both primary and secondary audiences.

Primary conversion: Context dependent - Get Started Free for business intent; Explore Marketplace for discovery intent.

SEO role: Category hub.

Recommended layout

1. Compact hero.
2. Short explanation of category support.
3. Data-driven category grid.
4. Role-based next actions.
5. Optional explanatory note about future category expansion if approved.
6. Footer.

The page should not treat the current category count as a permanent brand claim.

47. Service Category Detail - dynamic template

Purpose: Capture category-specific product and Marketplace intent without creating thin SEO pages.

Examples: Construction, Cleaning, Plumbing, HVAC, Moving Services.

Primary audience: Businesses in the category.

Secondary audience: Marketplace visitors seeking that category.

Primary conversion: Get Started Free.

Secondary conversion: Explore businesses in the category.

SEO role: Category-specific software + marketplace intent.

Recommended layout

1. Breadcrumb + compact hero.
2. How GetContractorz applies to this category's business workflow.
3. Relevant verified capabilities.
4. Relevant role/process explanation.
5. Marketplace listings in the category if real listings exist.
6. Unique category FAQ only when useful.
7. Registration/Marketplace CTAs.

Publish threshold

Create/index only when the page can provide unique, useful information. Do not produce mechanically duplicated pages.

48. About

Purpose: Explain why GetContractorz exists and reinforce the product's operational focus and communication principles.

Audience: All visitors, especially evaluators seeking legitimacy/context.

Primary conversion: Get Started Free or Contact.

SEO role: Branded trust/company intent.

Recommended layout

1. Signature hero.
2. Problem/product origin narrative.
3. What the platform centralizes.
4. Product/brand principles.
5. Approved company/team facts if available.
6. Final CTA.

Missing information

The current source material does not provide:

- Founding story.
- Founder/team biographies.
- Incorporation details.
- Office locations.
- Mission history.
- Company milestones.
- Press.
- Investors.
- Partnerships.

Do not invent these. Add only when approved.

49. FAQ

Purpose: Resolve objections, clarify role workflows, establish accurate trust boundaries, and support conversion.

Audience: All public audiences.

Primary conversion: Contextual link to Get Started Free, Marketplace, Login, or Contact.

SEO role: Branded and long-tail informational intent.

FAQ groups

1. Platform basics.
2. Business registration.
3. Features/workflows.
4. Service categories.
5. Clients.
6. Employees.
7. Marketplace.
8. Pricing/current free access.
9. Verification and trust.
10. Privacy/data handling - only using approved policy facts.

Use accessible server-rendered accordions.

50. Contact

Purpose: Give visitors a real path to ask product, business, account, or general questions.

Audience: All public audiences.

Primary conversion: Submit contact enquiry through an approved channel.

SEO role: Branded navigational/support.

Recommended layout

1. Signature/compact hero.
2. Real contact-purpose cards.
3. Expectations + contact form.
4. Approved contact details.
5. Relevant FAQ subset.
6. Final CTA where appropriate.

Do not state support hours, response times, phone numbers, email addresses, demo availability, or office locations unless verified.

51. Privacy Policy

Purpose: Explain collection, use, storage, sharing, rights, and contact information for personal information/data in accordance with the actual product and applicable legal requirements.

Audience: All users.

Conversion role: None.

SEO role: Trust/legal utility.

Layout

- Compact legal hero.
- Last-updated date.
- Narrow reading surface.
- Clear H2/H3 hierarchy.
- Optional table of contents.
- Standard footer.

Important: Legal wording must be prepared or reviewed against actual product/data practices and applicable requirements. This strategy document is not a legal-policy substitute.

52. Terms of Use

Purpose: Define terms governing use of the public site/platform and clarify relevant relationships, responsibilities, Marketplace boundaries, and account use.

Audience: Public and registered users.

Conversion role: None.

SEO role: Legal utility.

The final legal terms should accurately reflect the actual platform and business model and should not introduce promises that conflict with the verified product foundation.

53. Cookie Policy - conditional

Create a dedicated Cookie Policy if the site's tracking, analytics, advertising, or consent implementation warrants one and the policy is approved.

Do not publish a template policy describing technologies that are not actually used.

54. Accessibility Statement - recommended/conditional

Use this page when GetContractorz is ready to make an approved public accessibility commitment and provide a real contact/remediation path.

The design system targets WCAG 2.2 AA, but an Accessibility Statement should describe actual practices and commitments rather than copying the design target as a legal guarantee.

Part XIII - Pages Not Recommended at Launch

55. Pricing

Do not create until pricing/plans are approved.

56. Testimonials / Customer Stories / Case Studies

Do not create until authentic proof exists.

57. Reviews / Ratings

Do not create until a real review model and approved data exist.

58. Partners

Do not create a partner page or logo strip without real partnerships.

59. "Verified Contractors"

Do not create any page or SEO program based on verification language.

60. Integrations

Do not create until actual integrations are verified and worth documenting.

61. Demo

Do not create a "Book a Demo" funnel unless the team has a real demo process and approved response/availability expectations.

62. Location landing pages

Do not mass-create province/state/city pages at launch. Add them only when real registered-business data supports the location and the page can offer unique value.

63. Blog / Resource center

A blog can become useful for SEO, but it is not required before the core product and Marketplace architecture is accurate.

Launch a content program only when GetContractorz can maintain:

- Editorial quality.
- Product accuracy.
- Search intent relevance.
- Internal linking.
- Update cadence.
- Clear author/review ownership.

If launched, prioritize operational guidance relevant to service businesses and useful Marketplace education, not generic SEO filler.

Part XIV - Global Navigation and Site Architecture

64. Recommended primary navigation

Desktop priority:

- Home.
- Features.
- How It Works.
- Service Categories.
- Marketplace.
- About.
- FAQ.
- Contact.
- Login.
- **Get Started Free.**

Alternative compact navigation

If space is limited:

- Product
 - Features
 - How It Works
 - For Service Businesses
 - For Clients
- Service Categories.
- Marketplace.
- Resources
 - About
 - FAQ
 - Contact
- Login.
- Get Started Free.

The primary public navigation should reflect the new information architecture and should not preserve dead or inaccurate links merely because they existed before.

65. Footer architecture

Recommended groups:

Brand

- Logo.
- Short accurate GetContractorz description.
- Current market scope if useful.

Product

- For Service Businesses.
- Features.
- How It Works.
- For Clients.
- Get Started Free.
- Login.

Marketplace

- Explore Marketplace.
- Supported Service Categories.
- Category links when indexable and useful.

Company / Help

- About.
- FAQ.
- Contact.

Legal

- Privacy Policy.
- Terms of Use.
- Cookie Policy if applicable.
- Accessibility Statement if approved.

Social

Only real, active profiles.

Part XV - CTA System

66. CTA hierarchy

Primary business CTA

Get Started Free

Use for:

- Homepage.
- For Service Businesses.
- Features.
- How It Works.
- Category pages.
- Final CTA panels.

Contextual business CTAs

- Create Your Free Account.
- Register Your Business.
- Start Managing Your Business.

Marketplace CTAs

- Explore the Marketplace.
- View Business.
- View Contact Information.
- Contact This Business.

Client CTAs

Use real product actions such as Login or access/help paths. Do not invent a generic “Get Started” path for clients if their account is created through the business invitation flow.

CTA design rule

Orange means priority. Do not place several orange buttons with equal weight in the same component group.

Part XVI - Internal Linking System

67. Core product links

Home should link to:

- For Service Businesses.
- Features.
- How It Works.
- Service Categories.
- Marketplace.
- FAQ.
- Get Started Free.

Feature pages

Link feature explanations to:

- How It Works.
- Relevant category pages.
- FAQ.
- Get Started Free.

Category pages

Link to:

- Features.
- How It Works.
- Marketplace filtered to the category where appropriate.
- Relevant business profiles.
- Get Started Free.

Marketplace

Link to:

- Category hub/detail.
- Business profiles.
- Marketplace FAQ/trust explanation.

Business profiles

Link to:

- Category page.
- Marketplace.
- Related businesses only when data supports relevance.

FAQ

Each answer should link to the page that fully addresses the topic when a deeper explanation exists.

Part XVII - Page-Level SEO Requirements

68. Metadata system

Every indexable page should define:

- SEO title.
- Meta description.
- Canonical URL.
- Open Graph title/description.
- Open Graph image where appropriate.
- One H1.
- Logical H2/H3 hierarchy.

Do not reuse the same title/meta description across category or business pages.

68.1 Title strategy

Favor:

Primary intent | GetContractorz

Avoid stuffing multiple cities, categories, or synonyms into one title.

68.2 Meta descriptions

Describe:

- The page's actual purpose.
- The supported product/discovery action.
- A useful differentiation.

Do not insert unsupported counts, ratings, or guarantees.

69. URL architecture

Recommended patterns:

```

/
/for-service-businesses/
/features/
/how-it-works/
/for-clients/
/marketplace/
/marketplace/business/<business-slug>/
/service-categories/
/service-categories/<category-slug>/
/about/
/faq/
/contact/
/privacy/
/terms/
/cookies/                # if applicable
/accessibility/           # if approved
  
```

Potential future location pattern:

```
/marketplace/<country>/<region-or-state>/<city>/
```

Use only when data and page quality justify it.

Part XVIII - Design-to-Copy Rules

70. Hero rules

A hero should contain:

1. Optional eyebrow.
2. One H1.
3. One short supporting paragraph.
4. One primary CTA.
5. Optional secondary CTA where the audience truly has a second path.
6. Sparse geometric decoration.

Copy constraints

- H1 should usually fit within 6-12 words.
 - Avoid more than three desktop lines.
 - Highlight one meaningful phrase or one to two words in orange.
 - The homepage hero should prioritize service-business operations.
 - Marketplace should not receive equal hero priority unless the page itself is Marketplace.
-

71. Feature-card rules

Each card should communicate:

- One capability.
- One practical use/outcome.
- No more than one proof/detail layer.

Avoid vague cards such as “Powerful tools” or “Smarter business” when a verified product noun can be used.

72. Process-section rules

- Use 3-5 steps in a high-level process section.
 - Use the full verified workflows only where users expect detail.
 - Separate Manager, Client, Employee, and Marketplace journeys.
 - Do not merge every role into one linear process.
-

73. Trust/reassurance rules

Reassurance should use:

- Plain language.
- Neutral panels.
- FAQs.
- Information icons.

Do not use:

- Trust seals.
 - Verification badges.
 - Shield graphics paired with unsupported “secure/verified” claims.
 - Fake guarantees.
-

Part XIX - Information Required Before Final Copywriting

74. Verified information already available

The current foundation is sufficient to write accurate first-generation copy for:

- Platform definition.
 - Primary purpose.
 - Audiences and roles.
 - Market scope.
 - Core problems.
 - Differentiation.
 - Manager capabilities.
 - Client capabilities.
 - Main role workflows.
 - Supported categories.
 - Current-free-access model.
 - Marketplace model.
 - Trust/verification limitations.
 - Claim restrictions.
 - Core CTAs.
 - Known objections.
 - Brand feel.
 - Existing visual design language.
-

75. Information still needed or useful to strengthen the brand

These are not blockers for the core public rebuild, but collecting them would improve future credibility, SEO, and conversion.

Company identity

- Legal business/entity name.
- Country/province/state of incorporation.
- Founding date.
- Founders/leadership.
- Approved company story.
- Approved mission/vision.
- Team information.
- Public business address if appropriate.
- Official support/contact channels.

Product operations

- Exact security/privacy controls that can be publicly claimed.
- Data retention/deletion behavior.
- Backup/recovery statements that can be verified.
- Support process.
- Approved support hours.
- Approved response-time expectation.
- Mobile/browser support.
- Any existing integrations.
- Any notification channels beyond verified email.
- Exact analytics available to Managers.
- Payout mechanics and supported payment/banking flows, if public explanation is desirable.

Marketplace

- Which business fields are public.
- How businesses update public listings.
- Whether businesses can opt out of public display.
- Search/filter fields.
- Sorting logic.
- Location/service-area model.
- Public contact field rules.
- Business profile indexing policy.
- Marketplace terms/disclaimer wording.

Conversion proof

- Genuine customer testimonials.
- Permissioned customer logos.
- Case studies.
- Usage statistics.
- Registration counts.
- Job/quote/invoice counts.
- Marketplace engagement.
- Measured time/operational outcomes.
- Support satisfaction metrics.

Commercial model

- Subscription launch plan.
- Pricing tiers.
- Billing frequency.
- Free-to-paid transition policy.
- Trial/grace periods.
- Cancellation/refund terms.
- Enterprise/custom arrangements, if any.

SEO content

- Search-demand prioritization by category.
 - Real listing density by country/region/city.
 - Category-specific product use cases.
 - Unique marketplace/category data.
 - Search Console query data after relaunch.
 - Conversion data by landing page.
-

Part XX - Content Governance

76. Claim approval system

Every claim should fall into one of four states:

A. Verified product fact

Supported by current product behavior or approved foundation.

Publishable.

B. Approved business fact

Provided and approved by the business owner/company.

Publishable.

C. Data-derived claim

Generated from reliable platform data.

Publishable only when the data source, definition, and approval are clear.

D. Unverified assumption

Based on old copy, generic SaaS conventions, design placeholders, or unsupported inference.

Do not publish.

77. Proof register

Maintain a simple proof/claims registry with:

- Claim.
- Claim type.
- Source.
- Owner.
- Approval date.
- Page(s) used.
- Review date.
- Notes/limitations.

This is particularly important for:

- Free/pricing status.
 - Marketplace counts.
 - Category count.
 - Location coverage.
 - Customer proof.
 - Security claims.
 - Support promises.
 - Partnerships.
 - Integrations.
-

78. Change management

When the product changes:

1. Update the product/messaging foundation.
2. Update this strategy document if the change affects positioning, pages, or claim rules.

3. Update data/config for categories and Marketplace fields.
4. Update affected public copy.
5. Recheck FAQs.
6. Recheck structured data.
7. Recheck legal/policy pages where relevant.
8. Recheck navigation and internal links.

The public website must not become a historical record of obsolete product behavior.

Part XXI - SEO Expansion Governance

79. Category-page publishing rule

A category page should be published/indexed only if at least several of the following are true:

- There is meaningful unique copy about how GetContractorz applies to the category.
- The category has real Marketplace businesses.
- There are distinct workflows/use cases worth explaining.
- There are category-specific FAQs.
- Search demand justifies the page.
- The page provides more value than a filtered list.

If not, keep the category in the index grid without creating a thin standalone page.

80. Location-page publishing rule

A location page should require:

- Real registered businesses in that location.
- A stable definition of location/service area.
- Enough listings or unique useful data to justify a page.
- Accurate title/H1 without implying total market coverage.
- Unique context.
- Non-duplicative value.

Do not publish a location page just because a keyword has volume.

81. Business-profile publishing rule

A Marketplace business profile should preferably include enough public business-supplied information to be useful, such as:

- Business name.
- Category/categories.
- Location/service area.
- Business description.
- Public contact information.

If the profile is too thin, consider noindex until it becomes useful.

Part XXII - Visual and Technical Quality Requirements

82. Accessibility

Target WCAG 2.2 AA.

Required public-page behavior includes:

- Semantic landmarks.
 - Skip-to-content link.
 - One H1.
 - Logical headings.
 - Visible keyboard focus.
 - Sufficient contrast.
 - 44x44px minimum pointer targets.
 - Accessible accordions.
 - Accessible mobile navigation.
 - Form labels and errors.
 - Reduced-motion support.
 - Accurate alt text for meaningful imagery.
 - Decorative imagery hidden from assistive technology.
-

83. Performance and crawlability

- Server-render essential copy.
 - Do not hide H1s behind animation.
 - Do not use images for text headings.
 - Reserve image dimensions.
 - Lazy-load below-the-fold imagery.
 - Optimize decorative assets.
 - Avoid full-screen loading placeholders.
 - Keep DOM order aligned with reading order.
 - Use canonical URLs.
 - Ensure CTAs and internal links point to real destinations.
-

84. Responsive design

Key breakpoints:

- Mobile: base.
- Tablet: 768px+.
- Desktop: 1024px+.
- Wide: 1280px+ with capped content width.

Core behavior:

- 1 → 2 → 3/4 column grids where appropriate.
 - Mobile gutters around 24px.
 - Tablet gutters around 64px.
 - Desktop gutters around 128px within capped content.
 - No horizontal scrolling.
 - Do not rely on hover for essential information.
-

Part XXIII - Complete Verified Foundation Register

This register ensures the original 32-question foundation is fully represented in the brand strategy.

Q1 - What is GetContractorz?

A business-management platform for service businesses in Canada and the United States connecting client management, team members, services, questionnaires, terms and conditions, quotes, jobs, invoices, banking information, and payouts in one system.

Q2 - Main purpose

Organize and manage operational workflow from client onboarding and requirements to employee assignment, work documentation, quotes, invoices, and payout tracking.

Q3 - Users and roles

Four registered roles: User, Manager, Employee, Client; plus public Marketplace visitors.

Q4 - Primary public audience

Service businesses in construction, cleaning, repair, maintenance, moving, landscaping, and other supported property-related categories. Secondary audience: people looking for service providers through Marketplace.

Q5 - Geography

Canada and the United States. More granular geographic claims require actual registered-business data.

Q6 - Main business problem

Disconnected or manual handling of clients, jobs, employees, questionnaires, photos, quotes, invoices, and payments. GetContractorz centralizes supported workflows.

Q7 - Client/discovery problem

Invited clients get one place for service questionnaires and relevant service/quote/invoice information. Marketplace visitors can discover registered businesses and contact them directly.

Q8 - Difference from Google/directory

Core product is an operations platform. Marketplace complements it with public business listings and direct contact information.

Q9 - Why a service business should join

Manage clients, employees, services, questionnaires, terms, quotes, assigned jobs, before/after images, invoices, and payouts from one platform. Registration/access are currently free.

Q10 - Client workflow

Manager creates client → invitation → account access → manager creates personalized service → magic-link questionnaire → client submits → manager reviews/activates → client accesses relevant services, quotes, invoices.

Q11 - Service-business workflow

Register → User role → business form → Manager role/workspace → select categories/configure services → create questionnaires/T&Cs → add clients/team → personalized service + employee assignment → client questionnaire → manager activation → employee job + before/after images → manager handles quotes/invoices/payouts/reporting.

Q12 - Client capabilities

Role dashboard, services, questionnaires, email/magic links, relevant quotes/invoices.

Q13 - Manager capabilities

Profile/business/banking/credential information; questionnaires/T&Cs; clients/services/team; quotes; assigned jobs and before/after images; invoices; payouts; dashboard information/analytics.

Q14 - Supported categories

Construction, Cleaning, Landscaping, Plumbing, Electrical, Snow Removal, HVAC, Roofing, Siding, Handyman Services, Flooring, Windows & Doors, Appliance Repair, Moving Services, Carpet Cleaning, Pest Control.

Q15 - Category priority

No current category priority. Future prioritization may be based on registration, Marketplace activity, platform usage, or verified search demand.

Q16 - Business registration/approval

Anyone can create an account. User completes Business form, business is registered, role becomes Manager. No manual approval process currently.

Q17 - Verification

No independent verification of identity, licensing, credentials, insurance, employee backgrounds, service quality, or other business claims.

Q18 - Public statistics

No statistics currently approved. Any future counts require reliable data and approval. Category count should remain dynamic.

Q19 - Social proof

No genuine testimonials, reviews, case studies, ratings, partnerships, or other social proof currently available.

Q20 - Guarantees

No guarantees for quality, licensing, outcomes, completion, response times, satisfaction, or leads. Safe claims: currently free, centralized workflows, Marketplace listing, direct business contact.

Q21 - Revenue model

Currently free and not generating revenue from users. Future subscription model planned but not finalized.

Q22 - Client/Marketplace cost

No current GetContractorz platform fee. Service pricing/payment is handled directly with the chosen business.

Q23 - Service-business cost

Registration and platform access are currently free. Do not advertise future pricing until finalized.

Q24 - Client/Marketplace value proposition

Invited clients: organized place to submit requirements and access relevant service information. Marketplace visitors: explore registered service businesses and contact the selected provider directly.

Q25 - Service-business value proposition

Manage clients, employees, jobs, documents, quotes, invoices, and payouts in one connected platform. Concise approved version: "Run your service business from one organized workspace."

Q26 - Brand feel

Professional, trustworthy, simple, helpful, organized, practical, confident, not exaggerated, overly corporate, or technically complicated.

Q27 - Never claim

No verification/screening/approval/licensing claims; no guaranteed quality/completion; no "best" providers; no unsupported stats/proof; no implication providers are employees; no implication GetContractorz performs services; no earnings/savings/leads/growth promises; no premature subscription promises; no claim that GetContractorz selects/hires businesses for clients.

Q28 - Main service-business action

Primary CTA: Get Started Free. Alternatives: Create Your Free Account, Register Your Business, Start Managing Your Business.

Q29 - Main Marketplace action

Explore the Marketplace → View Contact Information / Contact This Business. Make direct business-to-visitor arrangement clear.

Q30 - Concerns/objections

Business concerns: free status, category fit, setup difficulty, available features, handling of business/financial data, future charges, lead guarantees. Client/visitor concerns: verification, guarantees, personal information, obligation, GetContractorz's role in final agreement.

Q31 - Old public copy treatment

Treat all old public copy as unverified by default. Do not migrate statistics, testimonials, workflows, service claims, locations, verification language, pricing, guarantees, or positioning without current confirmation.

Q32 - Accurate information worth keeping

Source of truth: working dashboard; four roles; verified workflows; current supported categories; Canada/US market; current free access; Marketplace functionality; confirmed brand assets/interface components. Dashboard remains unchanged. Public design may be preserved while structure/copy are rebuilt from the verified foundation.

Part XXIV - Final Brand and Website Discipline

85. Brand operating principle

GetContractorz should earn confidence through **clarity, product specificity, and operational usefulness**, not through exaggerated proof.

86. Website operating principle

Every public page should answer three questions:

1. **Who is this page for?**
2. **What verified problem or task does it address?**
3. **What is the single most appropriate next action?**

If a section cannot answer one of those questions or provide real proof/context, it should probably not exist.

87. SEO operating principle

Create pages because a distinct user intent deserves a distinct useful answer, not because a keyword variation exists.

88. Conversion operating principle

Reduce friction by making the product understandable, the current-free-access model clear, the supported categories visible, and the next action obvious.

89. Trust operating principle

Never turn absence of verification, testimonials, statistics, or guarantees into invented trust language. Neutral accuracy is part of the brand.

90. Design operating principle

Use the established design grammar:

Soft-gray space, navy structure, orange priority, MODERNIZ confidence, rounded practical components, restrained geometric decoration, and clear responsive grids.

91. Definition of done for future public copy

A page is ready for publication when:

- Its audience and search intent are defined.
- Its primary conversion is defined.
- Every product claim is verified.
- Unsupported proof is absent.
- Marketplace trust boundaries are accurate.
- The page uses the shared visual system.
- It has one H1 and unique metadata.
- It links logically into the rest of the site.
- It does not duplicate another page's intent.
- It works on mobile and desktop.
- It meets accessibility requirements.
- It is crawlable where indexing is intended.
- Its legal/privacy statements match approved policies.
- Its CTA leads to a real working destination.
- The page still makes sense if no testimonials, logos, or statistics are available.

Final summary

GetContractorz should be positioned first as a **service-business management platform**, not as a contractor directory. Its strongest public story is the organization of clients, team members, services, questionnaires, terms, jobs, work images, quotes, invoices, banking information, payouts, and related dashboard information in one connected workspace. The Marketplace is an important secondary discovery layer that allows visitors to browse registered service businesses and contact them directly.

The public website should launch with a disciplined 12-page core architecture, expand through high-quality category pages when unique value exists, and add business-profile pages dynamically from real Marketplace data. Location pages, pricing pages, social-proof pages, and other SEO expansion should be introduced only when the underlying product, data, proof, or commercial model supports them.

The brand should remain professional, practical, simple, organized, and confident. Its design should preserve the current GetContractorz visual grammar, while its copy should be rebuilt entirely from verified facts rather than old public text.
